4

Add / Remove pages

Clicking on the "Add" icon shows the new page creation user interface. You can remove the currently selected pages from the document by clicking the "Remove" icon.

6

Rotate

Rotates the selected page 90 degrees clockwise or counterclockwise. This can be invoked multiple times.

7

Merge / Extract

A document can be created from one or multiple files. You can also extract selected pages from one document and put them into another document.

8

Export

The export toolbar action allows you to create a new document comprised of the pages selected in the document view. This action does not modify the current document in any way. When selected, you will be presented with a dialog where you can name the new PDF file and optionally select its location.

Add New Page or Delete Pages

Click on the New Page icon to see the new page creation UI. You can remove the currently selected pages from the document by clicking the Delete Pages icon.
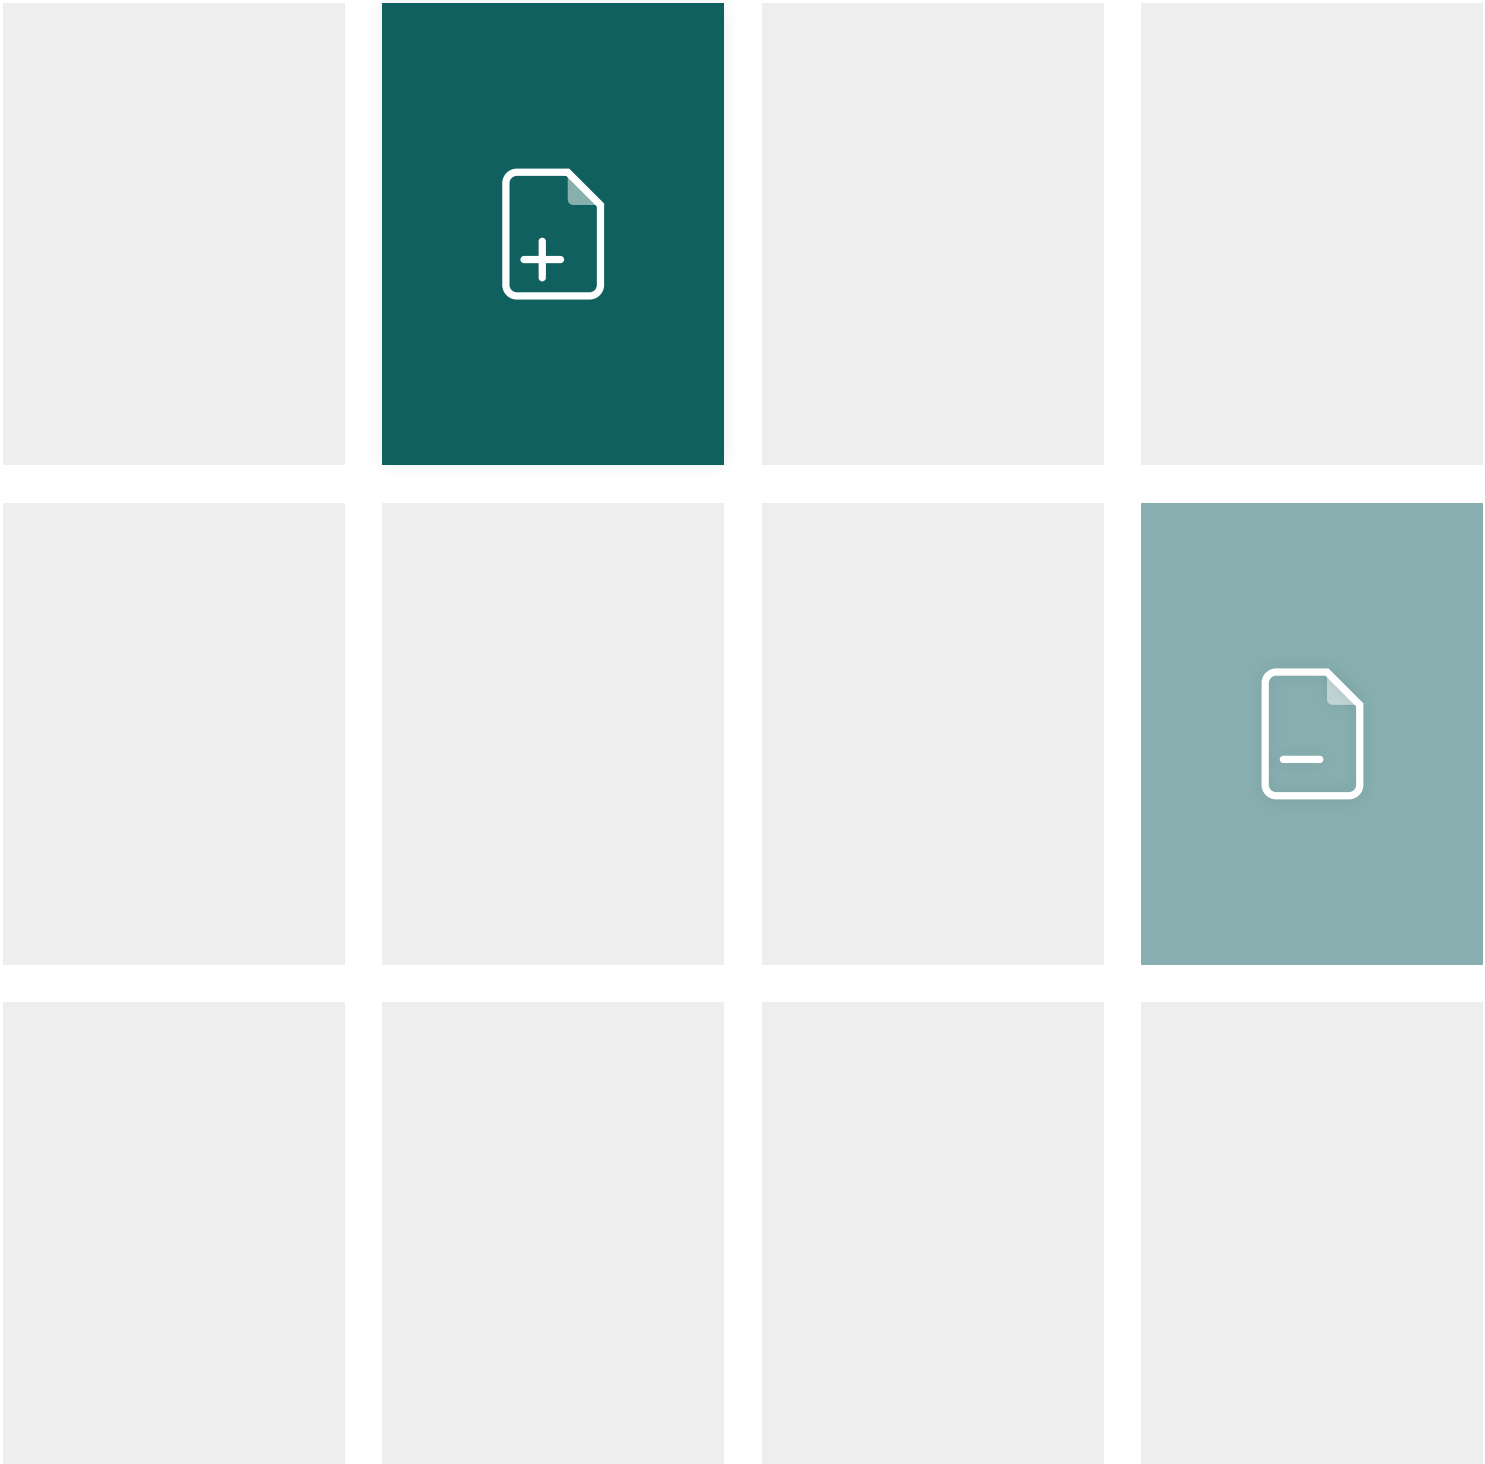

Duplicate

Use this action to create copies of the currently
selected page(s).
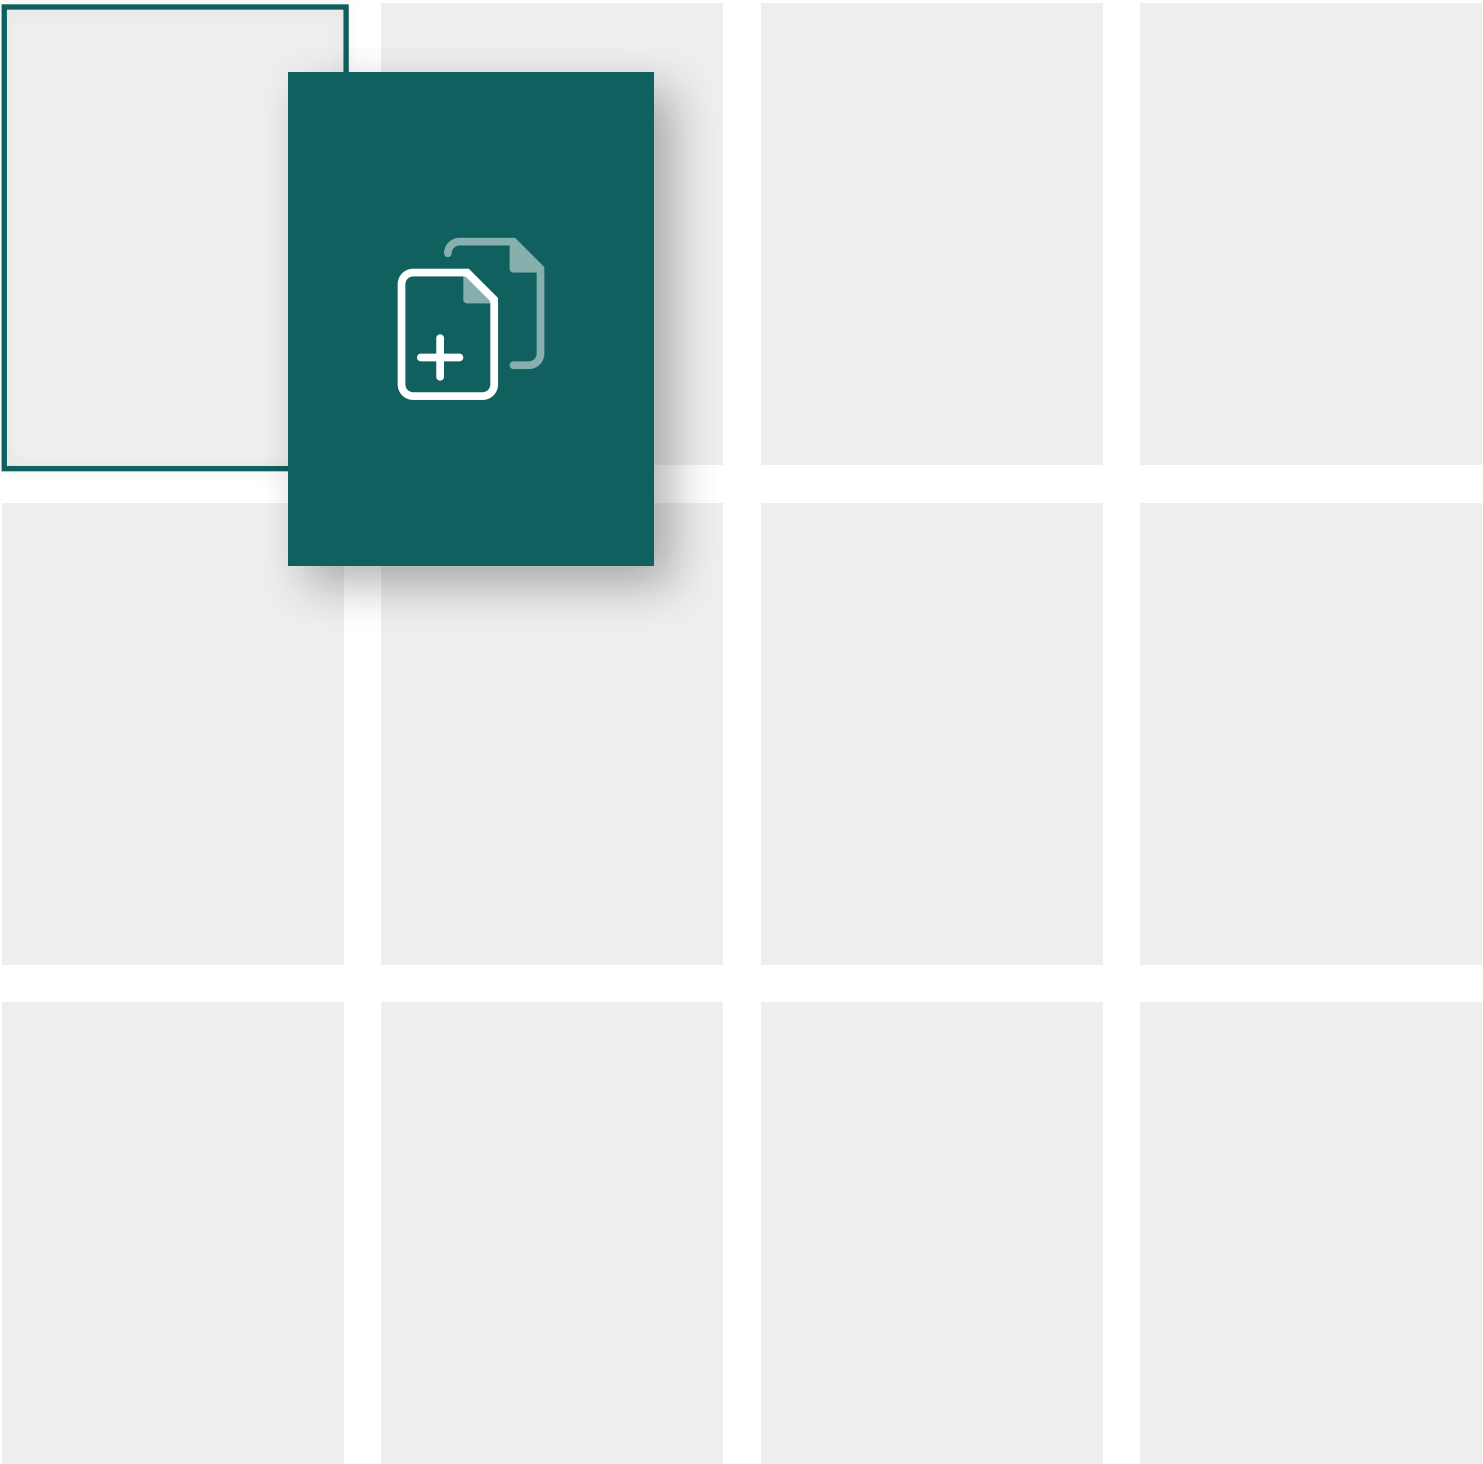

Rotate

Rotate the selected page(s) 90 degrees clockwise or counterclockwise. This can be invoked multiple times.
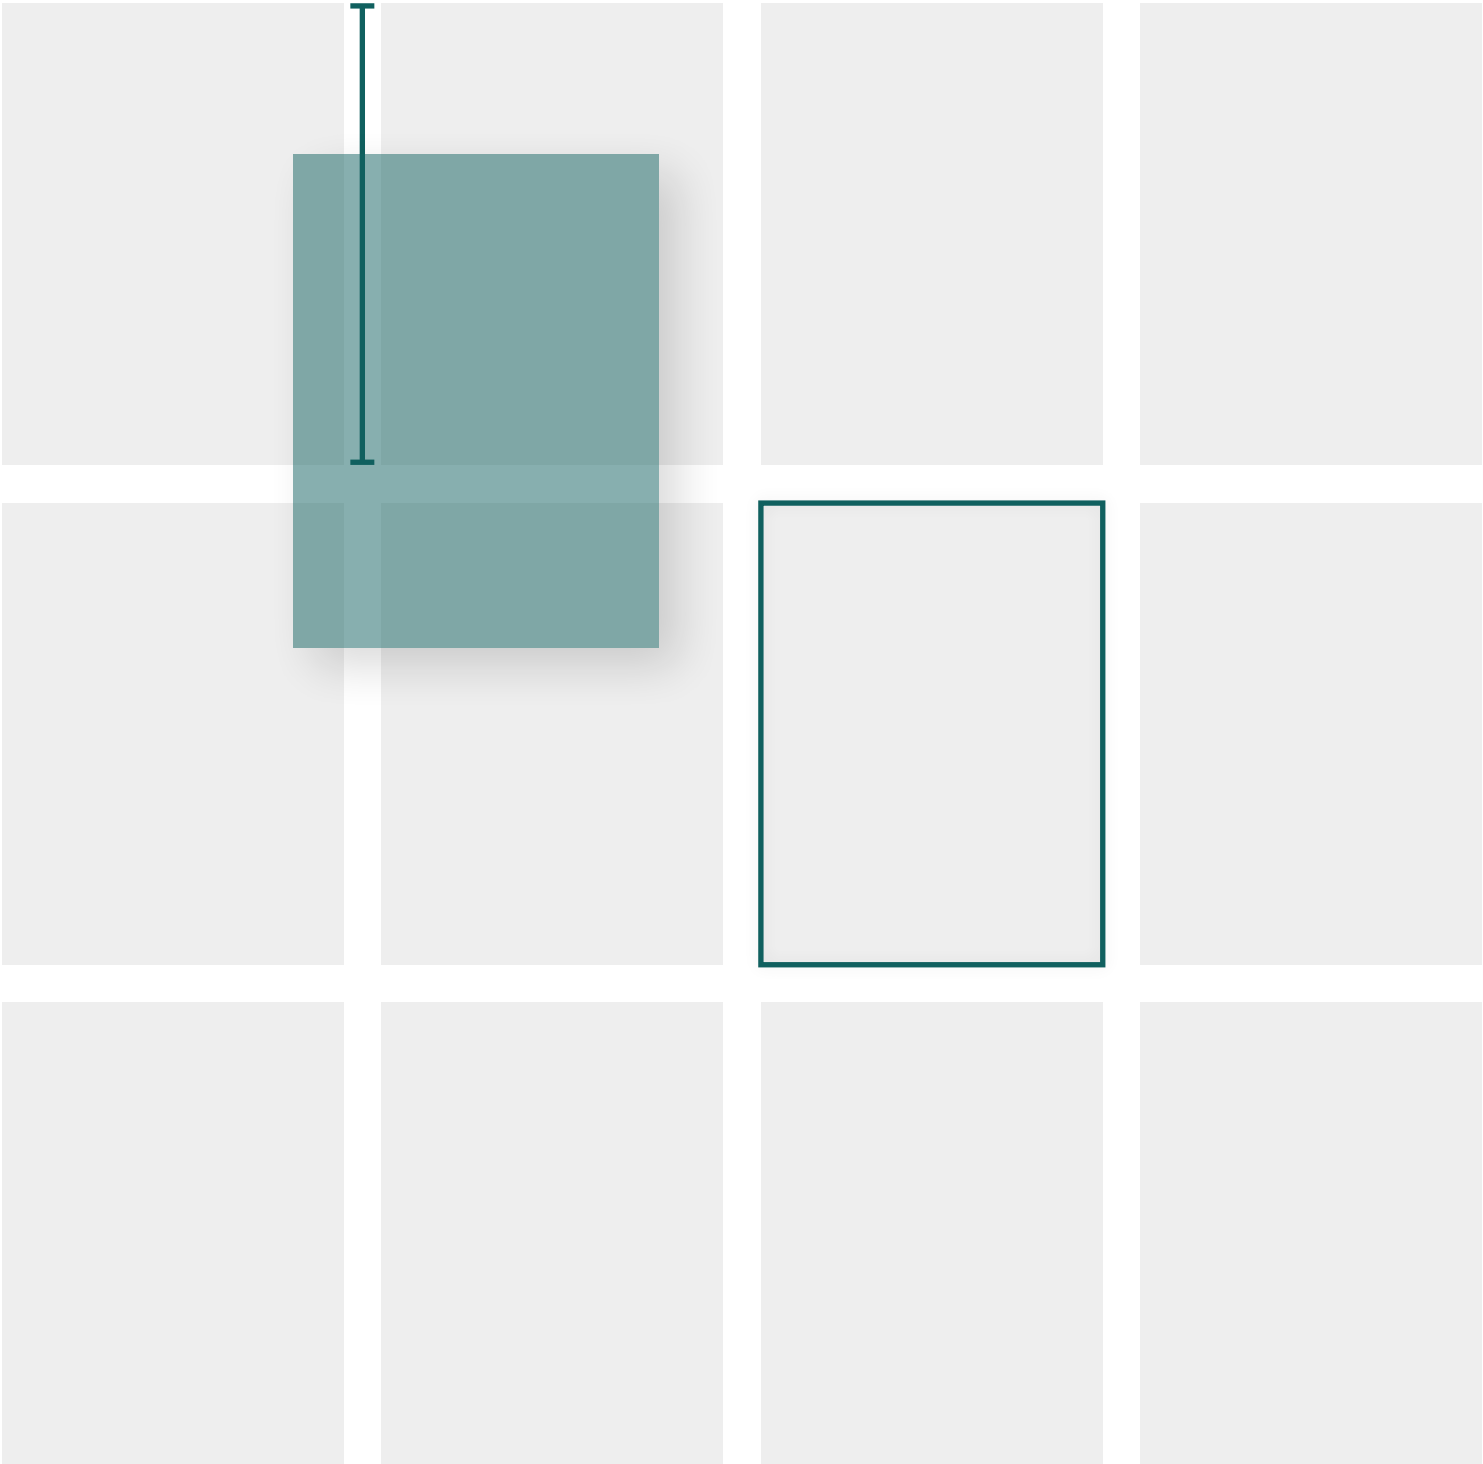

Move Pages

Move the selected page(s) to after or before
the neighboring page(s). You can also move the
selected page(s) to after a specified page.

Drag and Drop

Use drag and drop to change the order
of pages in a document.

Import Document

Create a document from one or more files by adding the provided document before or after the specified page index.

Export

Use the export toolbar action to create a new document comprised of the pages selected in the document view. This action doesn't modify the current document in any way. When selected, you'll be presented with a dialog where you can name the new PDF file and optionally select its location.
